Product Description

Custom Two Layers Magnetic Gift Box Skincare Set Packaging Drawer Ribbon With Magnetic Closure

Product Overview

This **two layers magnetic box** is engineered for brands that sell premium sets rather than single items. A rigid **custom printed packaging box** with a flip flap lid on the upper level and a sliding drawer on the base level gives you two separate presentation zones inside one finished **luxury gift box**. The upper level holds the hero item on a die-cut insert, while the lower drawer keeps the supporting pieces hidden until the buyer pulls the ribbon link.

We built this structure around two of the fastest growing gift segments: **skincare packaging** sets (serum, cream, toner, sheet mask, applicator) and wine or spirits sets (bottle plus glassware or gourmet pairing). Every box is made to your own dimensions, so the interior is not a compromise around stock sizes.

Upper level – flap lid compartment: a hinged flap opens upward and stays closed with concealed magnets, so the hero product is revealed in a single motion. This is the level buyers photograph and post.

Lower level – drawer base: a friction-controlled sliding drawer with a satin ribbon link pull, sized for accessories, refills, miniatures or gourmet items.

Ribbon link finishing: the ribbon runs from lid to drawer so the two levels read as one continuous piece instead of two stacked boxes.

Also available as a plain **two piece rigid box** without magnets for cost-sensitive programmes, or with a soft-touch matte lamination for a quieter, skin-care appropriate hand feel.

Structure That Solves the Real Concerns of a Two Layers Gift Box

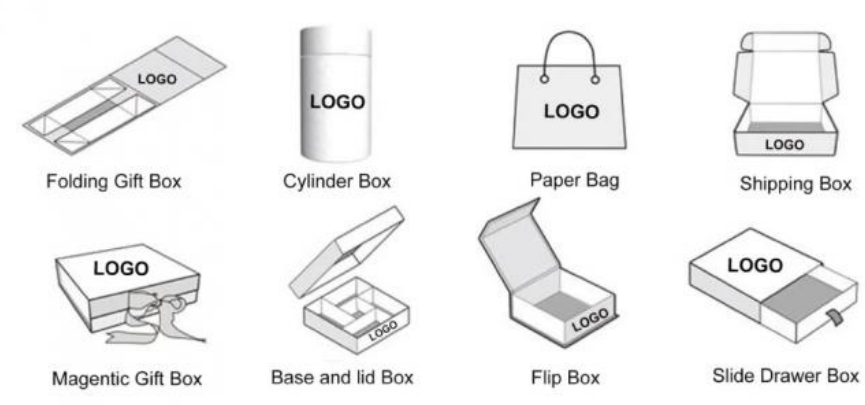
Buyers of a **two layers gift box** ask the same practical questions in every sourcing round. The table below maps each concern to the design answer built into this box, with the applications where it matters most.

Customer Concern	How This Box Solves It	Ideal Application
Will the two levels feel like one product, not two boxes taped together?	Ribbon link runs continuously from lid to drawer, and both levels share the same wrap, edge colour and lamination, so the set reads as a single **magnetic closure box**.	Skincare gift sets, holiday coffer sets
The lid opens too easily in transit, product falls out on the shelf.	Concealed neodymium magnets hold the flap lid shut through handling and courier drops; opening requires a deliberate upward pull.	Retail shelf display, e-commerce shipping
Bottles and jars knock against each other during delivery.	Die-cut EVA or paper pulp insert locks each item in its own cavity; the rigid greyboard wall on both levels stops lateral movement.	Serum, essence, ampoule, toner sets
Bottle sets are heavy and the drawer sags or jams.	Base drawer is built on 1200–1500 gsm greyboard with a reinforced floor and a controlled-glide channel, tested with a 2.5 kg load.	Wine, whisky, spirits and glassware sets
We need the box to look branded, not generic.	Full-surface CMYK or Pantone print, plus **gold foil stamping box** detailing on the lid for logos and collection names.	Luxury retail, corporate gifting
Buyers want the unboxing to feel staged, not instant.	Two-stage reveal: hero product first under the flap, secondary items after the drawer pull. The pause is what creates the premium impression.	Subscription box packaging, PR mailers

Sustainability claims must be defensible.	FSC-certified paper wrap, water-based glue and a fully recyclable mono-material board option make this an **eco friendly gift box** you can state on-pack.	Clean beauty, organic cosmetics
Repeat orders must look identical to the first run.	Print plates, colour proofs and the die are kept on file, so reorders match the approved sample without re-approval cycles.	Seasonal collections, annual gift programmes

Product Specifications

Item	Specification
Product Name	Custom Two Layers Magnetic Gift Box with Flap Lid and Drawer Base
Structure	Upper flap lid compartment + lower sliding drawer, ribbon link between levels
Closure	Concealed magnet flap lid + friction glide drawer with ribbon pull
Board	Greyboard 1000–1500 gsm, rigid construction, wrapped and turned-in edges
Wrap Paper	157–200 gsm art paper, specialty textured or kraft paper option
Printing	CMYK offset, Pantone spot colour, or plain unprinted wrap
Finishing	Matte or gloss lamination, soft-touch, spot UV, embossing, debossing, gold or silver foil
Insert	Die-cut EVA foam, paper pulp, moulded pulp or folded paperboard, custom cavities
Ribbon	Satin, grosgrain or cotton ribbon in any Pantone-matched colour
Size	Fully customised to your product dimensions
Colourway	White and light grey shown as standard; any Pantone colour available
Certification	ISO 9001, FSC, Sedex, Disney audit compliant



Frequently Asked Questions on Paper Box Procurement

Q1: What information do you need from me to quote a two layers magnetic box accurately?

> Send four things: the internal dimensions you need, the product weight and quantity per box, the print artwork or a reference image, and your target annual or per-order volume. With those we can return a firm quotation, not a range.

Q2: What is the minimum order quantity, and does it change with printing?

MOQ is 500 pieces per size and design for printed rigid boxes. Plain wrapped boxes and stock-insert versions can start lower. Mixed sizes within one order can be discussed, but each size carries its own plate and die cost.

Q3: How is the price structured, and what drives it up?

Price is board thickness + wrap paper + printing method + finishing + insert + ribbon + quantity. Foil stamping, soft-touch lamination and EVA inserts are the three most common cost drivers. Increasing quantity is the fastest way to reduce unit cost, because plate and die charges are amortised.

Q4: Can I get a sample before placing a bulk order, and what does it cost?

Yes. We provide a white sample to check structure and fit, and a printed sample to check colour and finishing. Sampling takes 5–8 working days. Sample charges are refundable against the bulk order in most cases — confirm the terms on your quotation.

Q5: What artwork file format should I supply?

PDF, AI or EPS at 300 dpi with fonts converted to outlines, plus a dieline for the exact structure. If you only have a logo we can build the dieline and layout for you; a short approval round on the dieline before printing prevents the most expensive mistakes.

Q6: Can you match a Pantone colour exactly, including on textured paper?

We print to Pantone with drawdown proofs. On textured or kraft stock, ink absorbs differently, so we recommend a printed proof on the actual paper before mass production. Where an exact match is critical, we run a press proof and send you a physical copy.

Q7: How do you protect the boxes during shipping so edges arrive sharp?

Boxes ship flat-packed or pre-assembled in a**wholesale paper box** programme carton with corner protectors, moisture barrier wrap and a five-layer corrugated outer. Cartons are palletised and strapped for sea freight.

Q8: What are your payment terms?

Standard terms are 30% deposit with the balance against the pre-shipment inspection report. T/T, L/C at sight, PayPal and Western Union are accepted. Repeat customers on stable volume can move to net terms after review.

Q9: What happens if the delivered goods differ from the approved sample?

We photograph and inspect every batch before shipment and share the inspection record. If a verified deviation from the approved sample occurs, we re-produce the affected quantity or credit it. Claims are handled on the inspection record, so keep the approved sample until delivery is signed off.

Q10: Can you handle small-batch custom logo packaging for a new brand launch?

Yes. New brands typically start with one size, one print, one insert, and scale after the first sell-through. We can also supply a neutral kraft paper box version for early sampling while the printed run is being prepared.

Packaging & Shipping

Export packing is quoted separately from the box price, so you always see what the freight protection costs.

Item	Description	Lead Time
Sampling (white sample)	Structure and fit confirmation, unprinted board	5–7 working days
Sampling (printed sample)	Full print, lamination, foil and insert as ordered	7–10 working days
Pre-production	Dieline confirmation, plate making, paper sourcing	3–5 working days
Mass production	Printing, lamination, die cutting, mounting, assembly	15–20 working days for 500–3,000 pcs
Large volume	3,000 pcs and above, multiple production lines	20–28 working days
Inner packing	Each box wrapped in tissue, corner protectors on assembled units	Included in production

Outer carton	Five-layer corrugated export carton, moisture barrier, strapped pallet	Included in production
Inspection	Full QC report with photos before shipment	1–2 working days
Express (DHL / FedEx / UPS)	Samples and small orders, door to door	3–7 working days
Air freight	Urgent bulk orders to major hubs	5–10 working days
Sea freight	Best cost per unit for bulk, FCL or LCL	22–38 days port to port

Total lead time from approved sample to goods at destination is typically 30–45 days for sea freight. Book production 6–8 weeks before a fixed retail or holiday launch date.

Custom Order Process – From Inquiry to Delivery

Step	Stage	What the Customer Needs to Note
1	Inquiry & briefing	Give internal dimensions, product weight, quantity, print status and target delivery date. Missing dimensions are the main cause of requotation.
2	Structure proposal	We return a suggested structure and dieline. Confirm the opening direction, drawer depth and ribbon position now — changes later affect tooling.
3	Quotation	Check what is included: printing, lamination, foil, insert, ribbon, export packing. Compare unit price at your real annual volume.
4	Artwork & dieline	Supply vector artwork on the approved dieline. Keep 3–5 mm bleed and keep logos 5 mm clear of folds.
5	Pre-production sample	Approve structure, paper, colour and finishing on a physical sample. Written approval here is what defines the contract quality standard.
6	Deposit & scheduling	Deposit releases the production slot. Confirm the ship date in writing, and confirm whether packing is flat or assembled.
7	Mass production	Production runs 15–20 working days. Ask for in-line photos at the printing and assembly stages if your timeline is tight.
8	Quality inspection	Review the QC report and photos. Confirm carton marks, shipping marks and label content before we book freight.
9	Balance & shipment	Balance settles against the inspection report. Confirm the consignee details, HS code and incoterm before booking.
10	Delivery & after-sales	Check cartons on arrival for transit damage and report within 7 days. Keep one approved sample and one production sample for reorder comparison.

Get Your Personalized Size & Artwork Solution

Send inquiry for free quotation & sample support. Tell us your product dimensions, quantity and finish, and we will come back with a dieline, a quotation and a sampling plan.
